

Chemistry Summer School on f-elements

Aussois, France
June 12-16, 2022

Learn about these fascinating elements in a friendly atmosphere

Coordination chemistry
4f and 5f Organometallics
Catalysis and reactivity
Theoretical studies
Paramagnetic NMR
Optical properties
Molecular magnetism
Bioprobes
Magnetic Resonance Imaging

Dear colleagues,

We are very happy to announce that the first *Chemistry Summer School on f-Elements* will be held in Aussois, France in June 2022.

This summer school aims at providing young researchers with a strong and wide background on synthesis, reactivity and properties of f-block elements. It will offer a unique opportunity to strengthen the fundamental understanding of this diverse and fascinating field of research.

CS²fE is an initiative of the newly created French association of f-elements chemists. The organizing committee is willing to organize CS²fE every two years for all international researchers interested in the field.

Located in a small village in the gorgeous French Alps, the venue is ideal for a relaxed and friendly learning atmosphere. A poster session is included in the program for the participants to share their current scientific interests.

We sincerely hope that many students, post-docs and young researchers will be interested in joining us and enjoy a stimulating week in such a beautiful location.

The Organizing Committee
